

Quest Migration Suite for Active Directory

ZEROIMPACT MIGRATION TO ACTIVE DIRECTORY

- Supports thorough migration planning
- Provides uninterrupted business workflow
- Reduces workload
- Supports Active Directory pruning and grafting
- Delivers a comprehensive solution
- Identifies accounts and groups for migration and creates a migration schedule
- Migrates while users are working; no rebooting necessary
- Controls distributed processing and project management
- Provides intra- and inter-forest support for Active Directory to Active Directory

In the fast-paced world of IT, time is a precious commodity. Managing tasks and allocating appropriate resources is a delicate balance, and you need every advantage available to succeed. Your Active Directory (AD) migration initiative requires a solution set that will empower you to get the job done right – and get it done efficiently. Quest Software is here to help.

Quest® Migration Suite for Active Directory is a ZeroIMPACT™ solution for planning and executing your migration projects to AD from Windows NT, Novell NDS or AD. This powerful solution supports thorough migration planning and AD pruning and grafting—with no interruption to your business workflow. Its distributed processing and robust project management features simplify migration processes. Migration Suite is your comprehensive AD migration solution.

Reporter

Analyze, audit and secure your Windows infrastructure

Quest® Reporter enables administrators, security officers, and help desk staff to collect the data they need, whether for AD pre- and post-migration analysis, configuration change auditing, or for a security assessment of their Windows infrastructure. Reporter ensures adherence to sound network management practices by auditing compliance with corporate standards for user, group and file permissions management.

Whether you're planning your move to AD, checking compliance with user and group management policies, or ensuring appropriate file system permissions, Reporter brings the information together intelligently. Its extensive library of predefined and custom reports empower you to tailor the reporting process to meet your specific needs.

Domain Migration Wizard

Consolidate, split and migrate your Windows NT Domains

Quest® Domain Migration Wizard™ is a database-centric application designed for complex migration projects in distributed networks. It enables migration to AD and supports the consolidation and splitting of Windows NT domains. The Domain Migration Wizard Project Manager ties together peer administrators and their supervisors to more efficiently track and coordinate the migration progress throughout the entire transition cycle. Adding a layer of security and convenience, the Project Manager serves as a launch pad and control center for all your migration activity. Additionally, the Domain Migration Wizard Resource Kit provides unique tools and processes that deliver a smooth transition process. Geared towards distributed, enterprise-scale environments, Domain Migration Wizard delivers the most comprehensive, easy-to-implement solution for Windows NT migration and Exchange Server 5.5/2000/2003 processing.

Quest Migration Suite for Active Directory

ZEROIMPACT MIGRATION TO ACTIVE DIRECTORY

Migration Manager for Active Directory

ZerolMPACT restructuring and mirroring of AD

Empowering you to efficiently migrate and restructure your AD, Quest® Migration Manager for Active Directory ensures true coexistence between migrated and unmigrated users. Migration Manager simplifies migration processes and integrates workflow—from pre-migration analysis through setup, object migration, resource updating and post-migration cleanup. Whether your organization is creating directories to meet specific security regulations or undergoing an acquisition or merger, Migration Manager provides the features necessary to meet its evolving needs.

NDS Migrator

Accelerate and simplify your Novell Directory Services migration to AD

Conventional migration tools don't incorporate an enterprise-wide Novell Directory Services-to-Active Directory methodology. Migrating without a comprehensive tool means manually creating objects and reassigning rights, which is a risky process. In addition, migration projects require organization and central management. A migration to AD and Windows Server 2000/2003 affects the entire enterprise and requires major reconfiguration of resources.

Quest® NDS Migrator provides everything you need to migrate Novell NDS and Bindery environments to AD. The NDS Migrator central console enables access to all options, both pre- and postmigration, as well as scheduling. NDS Migrator provides a native view of both your NDS and AD tree for better planning. From complete account, group, and organizational unit migration, to file and directory migration and synchronization, NDS Migrator covers it all.

Migration Suite is one offering in our Solutions for Windows Management, featuring applications to manage AD, Exchange and Windows.
