What's New in Quest Reporter 6.3

Quest Reporter version 6.3 helps you administer your network by generating comprehensive enterprise-wide reports on both real-time and stored data. The application is distinguished by its ability to report on network objects across multiple domains. Its information-rich interface conveys the scope of the report, the available directories on which you can report, a list of available reports, and a list of reports that you have previously scheduled.

As a result of ongoing research and development efforts, and in response to customer feedback, the following changes and improvements have been made in version 6.3:

- Support for SQL Server versions has been updated
- Support for Windows NT has returned to Quest Reporter
- Database Maintenance Tool for Quest Reporter databases

Support for SQL Server versions has been updated

Quest Reporter 6.3 adds support for SQL Server 2008 and SQL Server Express 2008. Support for SQL Server 2000 has been dropped from Quest Reporter 6.3.

Support for Windows NT has returned to Quest Reporter

Quest Reporter 6.3 brings back support for Windows NT computers.

Database Maintenance Tool for Quest Reporter databases

Quest Reporter 6.3 introduces a new Database Maintenance tool to aid administrators in maintaining the health of their Reporter databases.

Improved User Experience of QKP Report Packs

Quest Reporter 6.3 provides a significant performance increase during the use of Quest Knowledge Portal Report Packs. The time taken to access reports has been reduced to increase performance and usability.

Last Logon Collection Improvements

Quest Reporter 6.3 provides significant performance increases in the collection of Last Logon timestamps. By allowing the distribution of Last Logon collectors to multiple RDCs, the time required to run these reports has been dramatically reduced.
